WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, Form 86ab, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatism (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on Forms 86ab is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 15 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

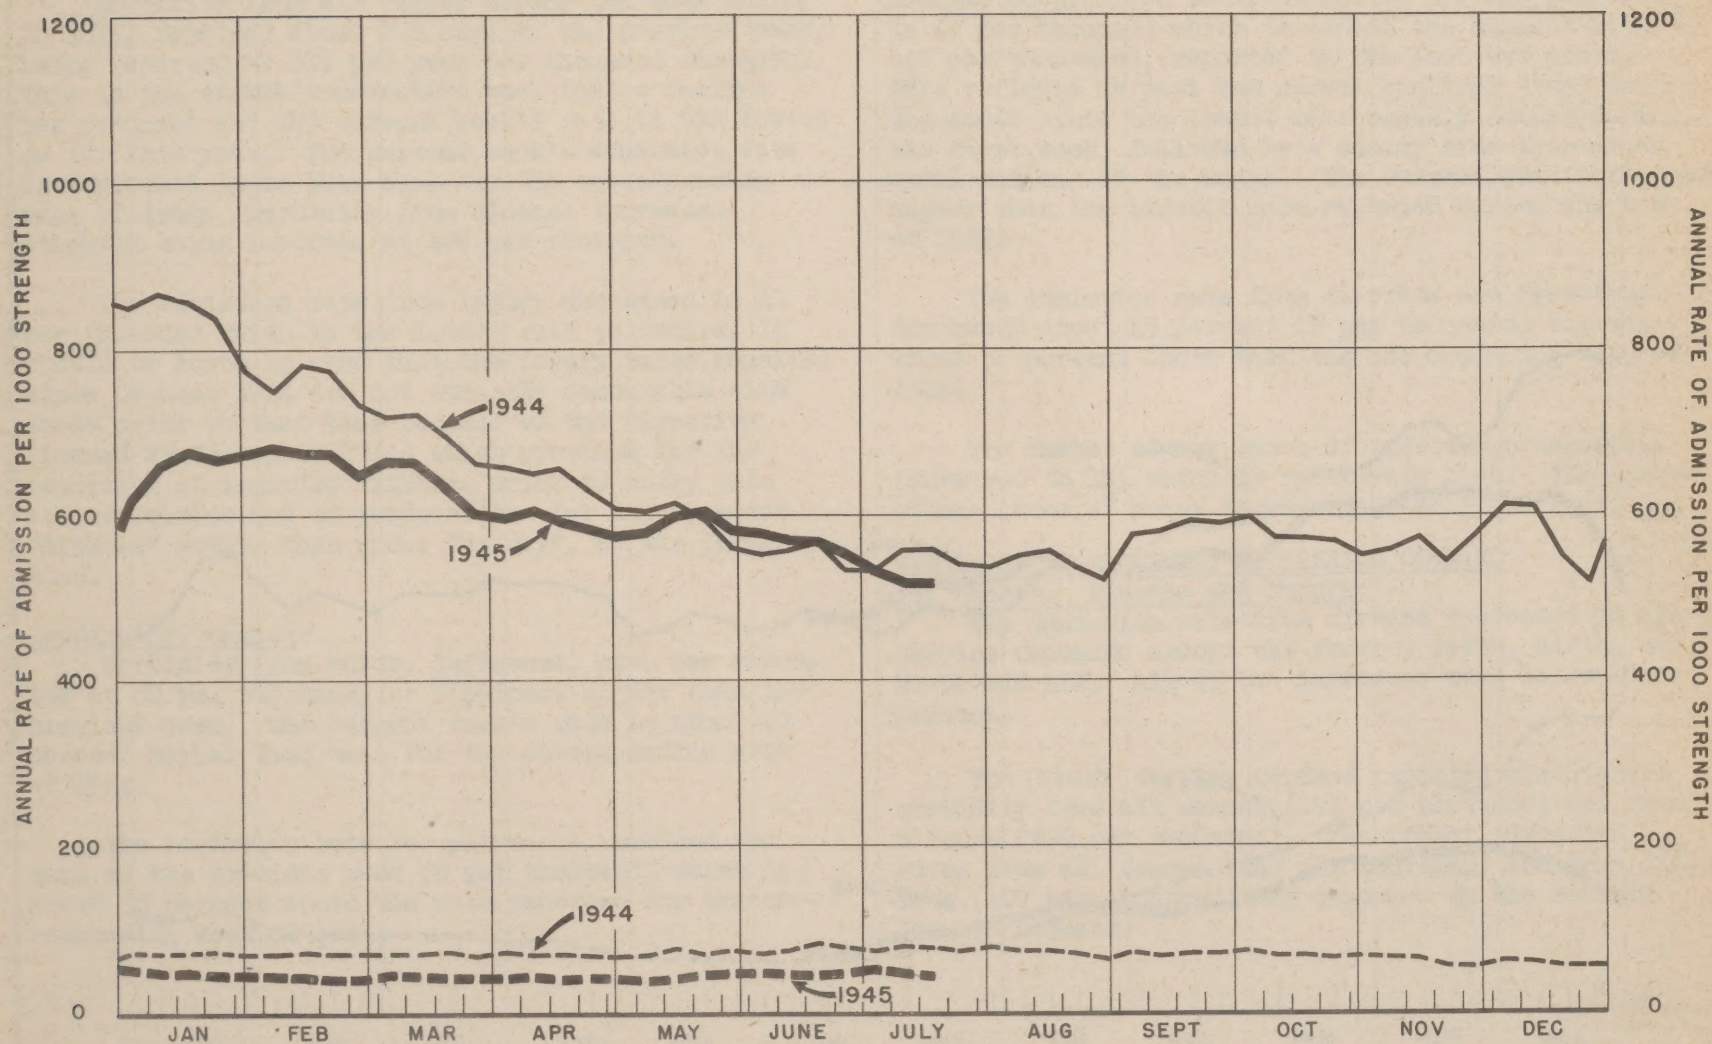

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

All Causes: Disease and Injury:

Morbidity from all causes during the week ending 20 July, remained about the same as the previous week, being reported at 519 per year per thousand strength. This is the eighth consecutive week that a decline has occurred and the current week's rate is the lowest so far this year. The current week's admission rate is 9 percent lower than that for the corresponding week of 1944. Morbidity from disease increased slightly being reported at 476 per thousand.

The admission rate from injury decreased to 43 per thousand which is the lowest rate on record. It should be borne in mind that the injury rates reported since October 1944 are not strictly comparable with those prior to that time because of the directive (issued 29 September 1944) which provided for the reporting of injuries existing prior to entry into active service and of readmissions for injury under "disease" rather than under "injury", as was formerly done.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 80 per thousand, or 5 percent higher than the previous week. The current week's rate is about 20 percent higher than that for the corresponding week of 1944.

The admission rate for pneumonia remained the same as the previous week (8 per thousand) which is about 30 percent above the rate reported for the corresponding week of 1944.

Common Communicable Diseases:

Morbidity from venereal disease, excluding cases contracted prior to entry on active service decreased to 47 per thousand which is almost the highest rate (49 per thousand), reported in the last two years. This reflects in part the normal cyclical trend during the month since the lowest rate usually occurs during the first week, followed by a steady rise thereafter until the end of the month. The current week's rate is higher than the highest rate reported during any week of 1944.

The admission rate from diarrhea and dysentery increased about 15 percent (7 per thousand) but was about 50 percent lower than the corresponding week of 1944.

The number of new cases of infectious hepatitis increased to 181 which is relatively high. The number of new cases of mumps increased about 20 percent.

VARIATION IN MORBIDITY BY SERVICE COMMAND

All Causes: Disease and Injury:

The admission rate from disease decreased in all Service Commands except the Fourth, Fifth, Sixth, and Ninth and MDW. All of the increases were below 10 percent.

The Ninth Service Command reported the highest morbidity from all causes (574 per thousand) and from disease (529 per thousand). The lowest admission rates from all causes (449 per thousand) and from disease (407 per thousand) was reported by the Seventh Service Command.

COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth and Eighth Service Commands reported the highest morbidity from injury (about 51 per thousand). All other Commands reported rates of 50 or less per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. increased in most Service Commands. An increase of over 20 percent was registered only in the Military District of Washington. The Eighth Service Command again reported the highest morbidity from these causes (95 per thousand), while the lowest was registered by the First Service Command (53 per thousand). All Service Commands except the Fourth, Eighth and Ninth and MDW had rates under 70 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases decreased in most Service Commands. Decreases of about 15 percent occurred in the Second, Sixth, Seventh, and Eighth Service Commands. The highest morbidity from these causes was in the Third Service Command (63 per thousand).

Exceptionally low morbidity from diarrhea and dysentery was reported in every Service Command, with only the MDW reporting a rate in excess of 9 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 27.2 per thousand strength for the week ending 13 July as compared with 29.0 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 93.7 per thousand.

PATIENTS REMAINING UNDER TREATMENT: 20 JULY 1945:

The number of neuropsychiatric cases remaining was 34,939 or about 1500 less than at the end of the previous week. Non-battle injury patients remaining numbered about 50,000. The number of battle casualty patients remaining decreased by about 521 to number 112,553.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ending 20 July there were 8,313 enlisted personnel discharged by CDD or about 70 less than the previous week. Thirty-eight percent of these discharges were reported by General Hospitals and 43 percent by Convalescent Hospitals. Included among the 8,313 CDD's were 2,599 neuropsychiatric cases.

ASSEMBLY STATIONS AND REDISTRIBUTION STATIONS:

As shown on page 12 the all causes admission rate at stations which are functioning as Assembly Stations was 530 per thousand and that at Redistribution Stations was 546 per thousand as contrasted with 517 per thousand at all other stations. Likewise, the admission rate for neuropsychiatric disorders was 37 per thousand at Assembly Stations and 91 per thousand at Redistribution Stations. It should be noted that at most of the Assembly Stations and a few of the Redistribution Stations other activities are carried out.

FORM 56-902-8 July 1944

RESTRICTED

COMMENT ON RECENT DEVELOPMENTS

FOR THE FIVE WEEK PERIOD ENDING 29 JUNE 1945

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from Forms 86ab rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the five week period ending 29 June 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This Report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc. are presented on page 25. Similar charts for specified diseases appear on pages 27, 29, and 31. A chart showing mortality trends is presented on page 33. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the Service Commands is given on page 34. The most pertinent morbidity data for individual stations are presented on pages 35 to 56. On pages 57 and 58 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is directed to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this Report as given on page 2. The term "month" in this report is used to denote the four or five week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES: DISEASE AND INJURY:

The admission rates from all causes and from disease for the Army in the continental United States decreased 5 percent in June. The Navy shore stations in this country also reported a decrease in morbidity in June. The Army's admission rate from disease during June (515 per thousand) was about 7 percent higher than for June 1944.

The admission rate from injury increased slightly in June to 53 per thousand. However, the recent experience is not strictly comparable with that prior to October 1944 because the relatively low level of injuries since that time reflects in part at least compliance with the directive issued 29 September 1944 which required readmitted and EPTS injuries to be reported as "disease" and not as "injury".

All Service Commands reported a decrease in morbidity from disease during June. The largest decrease (about 15 percent) was registered in the Second Service Command, while decreases of about 10 percent occurred in the Third, Sixth, and Seventh Service Commands.

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

The Ninth Service Command reported the highest morbidity from all causes and from diseases (both rates, however, being only about 5 percent higher than for the country as a whole). The lowest admission rate from all causes and diseases were again registered in the Military District of Washington (about 10 percent lower than for the entire country), followed closely by the Fifth Service Command. All causes admission rates within 3 percent of that for the total United States were reported by every Service Command except the Fifth, Seventh and Ninth and the Military District of Washington. It may thus be noted that there was relatively little spread between the morbidity rates of the Service Commands having the lowest and highest rates, although in previous years the range of variations, even though narrowing during the spring months, was generally much wider.

The admission rate for injury remained substantially the same in most Service Commands with the Third, Fourth and Eighth Service Commands and the MDW reporting a change in excess of 10 percent. The highest morbidity from injury during June was reported by the Fourth Service Command (67 per thousand), closely followed by the Eighth Service Command. Most of the other Commands reported rates of about 40 per thousand or less.

RESPIRATORY DISEASES:

During June the admission rates for colds, influenza, etc. decreased about 20 percent. The current month's morbidity was somewhat higher than during the corresponding month of 1944, although in previous months of this year the experience had been considerably lower than in 1944. Morbidity from respiratory diseases at shore stations of the Navy in this country decreased about 25 percent, but, the level experienced in the Navy was still somewhat higher than the Army.

Morbidity from colds, influenza, etc. decreased in all Service Commands. Decreases of 15 percent or more were recorded in every Service Command except the Ninth. The largest decreases (about 35 percent) was registered by the Second Third and Fifth Service Commands. The Sixth, Seventh and Ninth Service Commands reported the highest admission rates (about 123 per thousand). The lowest morbidity was reported by the Second Service Command (76 per thousand).

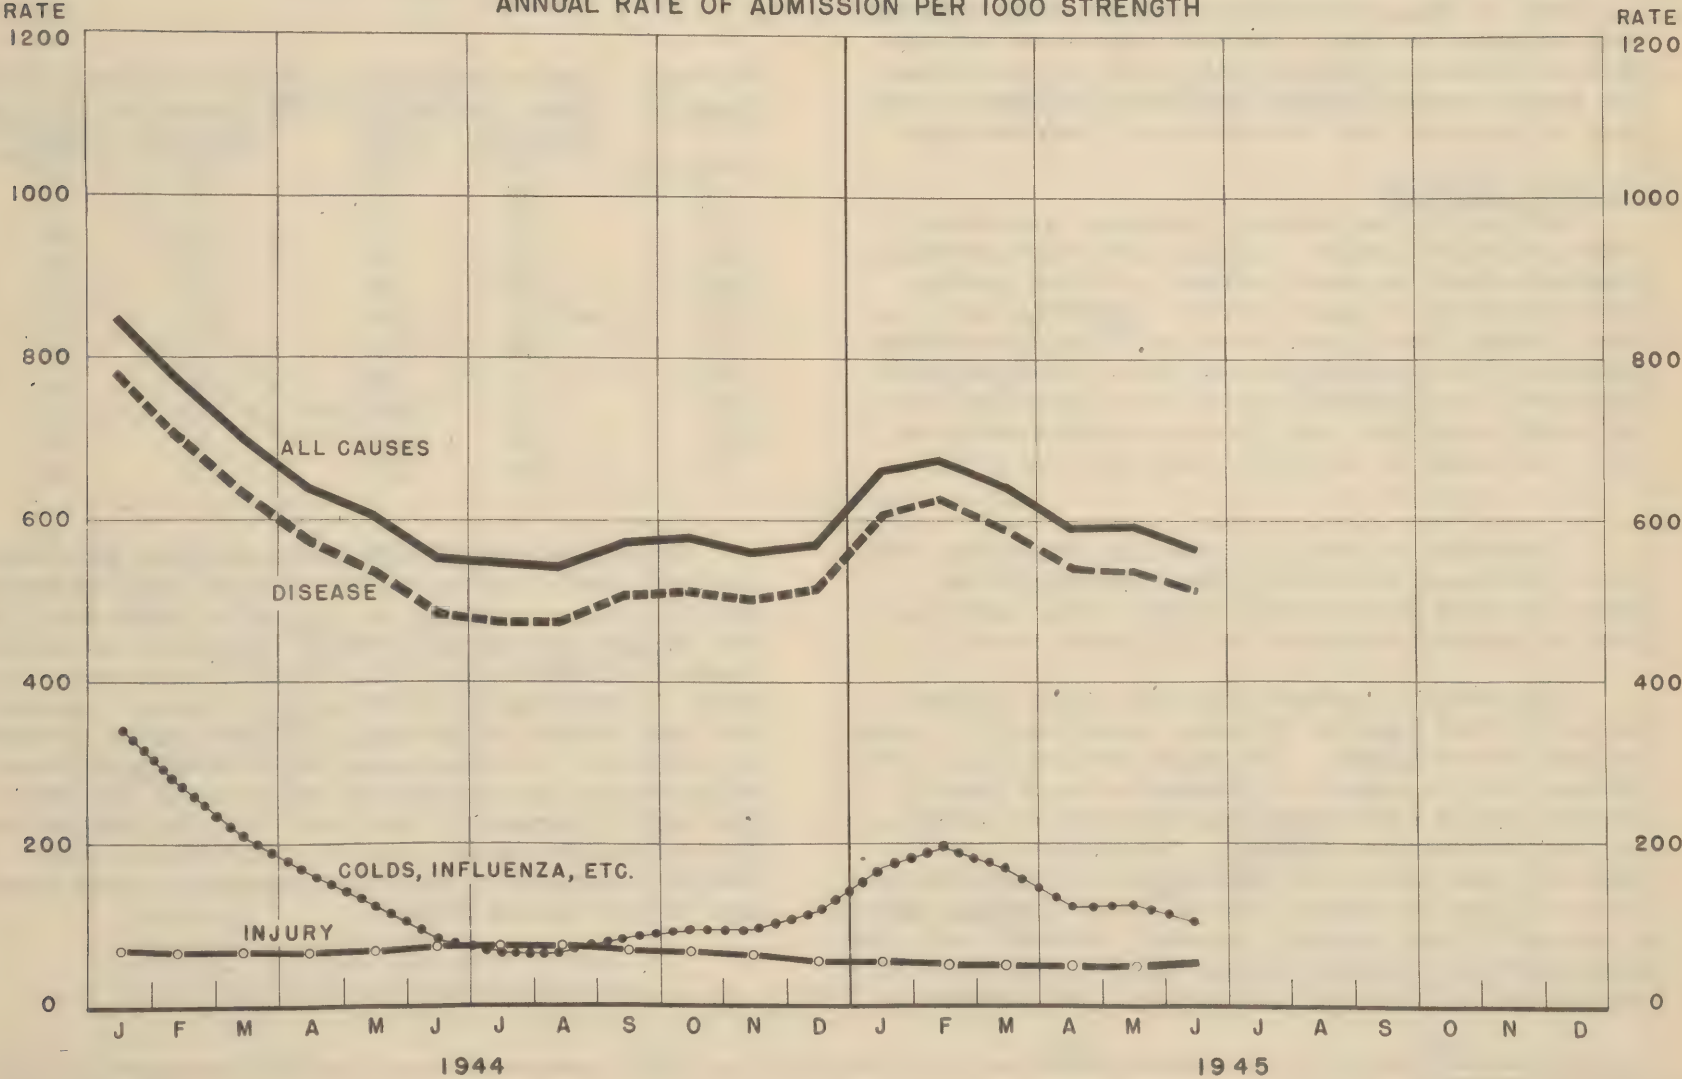

Morbidity from all forms of pneumonia combined decreased slightly from 11.6 per thousand to 10.7 per thousand. The admission rate for June 1945 was about 35 percent higher than for June 1944. Most of the Service Commands experienced a decrease in June, although the Third did register a significant increase. As a result, this command had the highest morbidity rate for this cause (16 per thousand), closely followed by the Eighth Service Command.

In June, atypical pneumonia accounted for 75 percent of all pneumonia admissions. The proportion of pneumonia cases diagnosed as atypical was highest in the Third, Fourth and Eighth Service Commands all of which exceeded 75 percent.

MORBIDITY FROM — ALL CAUSES — DISEASE

— INJURY — COLDS, INFLUENZA, ETC.

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery increased 15 percent in June, but continued to be lower than any rate reported in 1944. The admission rate for June 1945 was about 40 percent lower than for June 1944. The Fourth Service Command was the only Service Command to report a rate in excess of 7 per thousand.

VENEREAL DISEASES:

Morbidity from venereal diseases, excluding cases contracted prior to entry into active service, remained about the same in June as in May and was about 40 percent higher than for June 1944, and, in fact, higher than for any month of 1944. The Navy's morbidity for venereal disease during June was at a lower level than during May and also lower than for any month this year; the Navy's current experience from this cause is slightly lower than the Army's.

The admission rate for syphilis, excluding EPTS cases, increased about 10 percent in June. The admission rate for venereal disease other than gonorrhea and syphilis remained at 1.1 per thousand.

Most Service Commands reported about the same morbidity from venereal disease, excluding EPTS cases, in June as during May. The Fifth Service Command was the only one to report an increase of more than 10 percent, while a corresponding decrease was shown only by the Third Service Command. The highest rate in June was reported by the Third and Fifth Service Commands (53 per thousand), with no other Commands having a rate of 50 per thousand or more. However, only the Eighth Service Command and the Military District or Washington had rates of less than 40 per thousand.

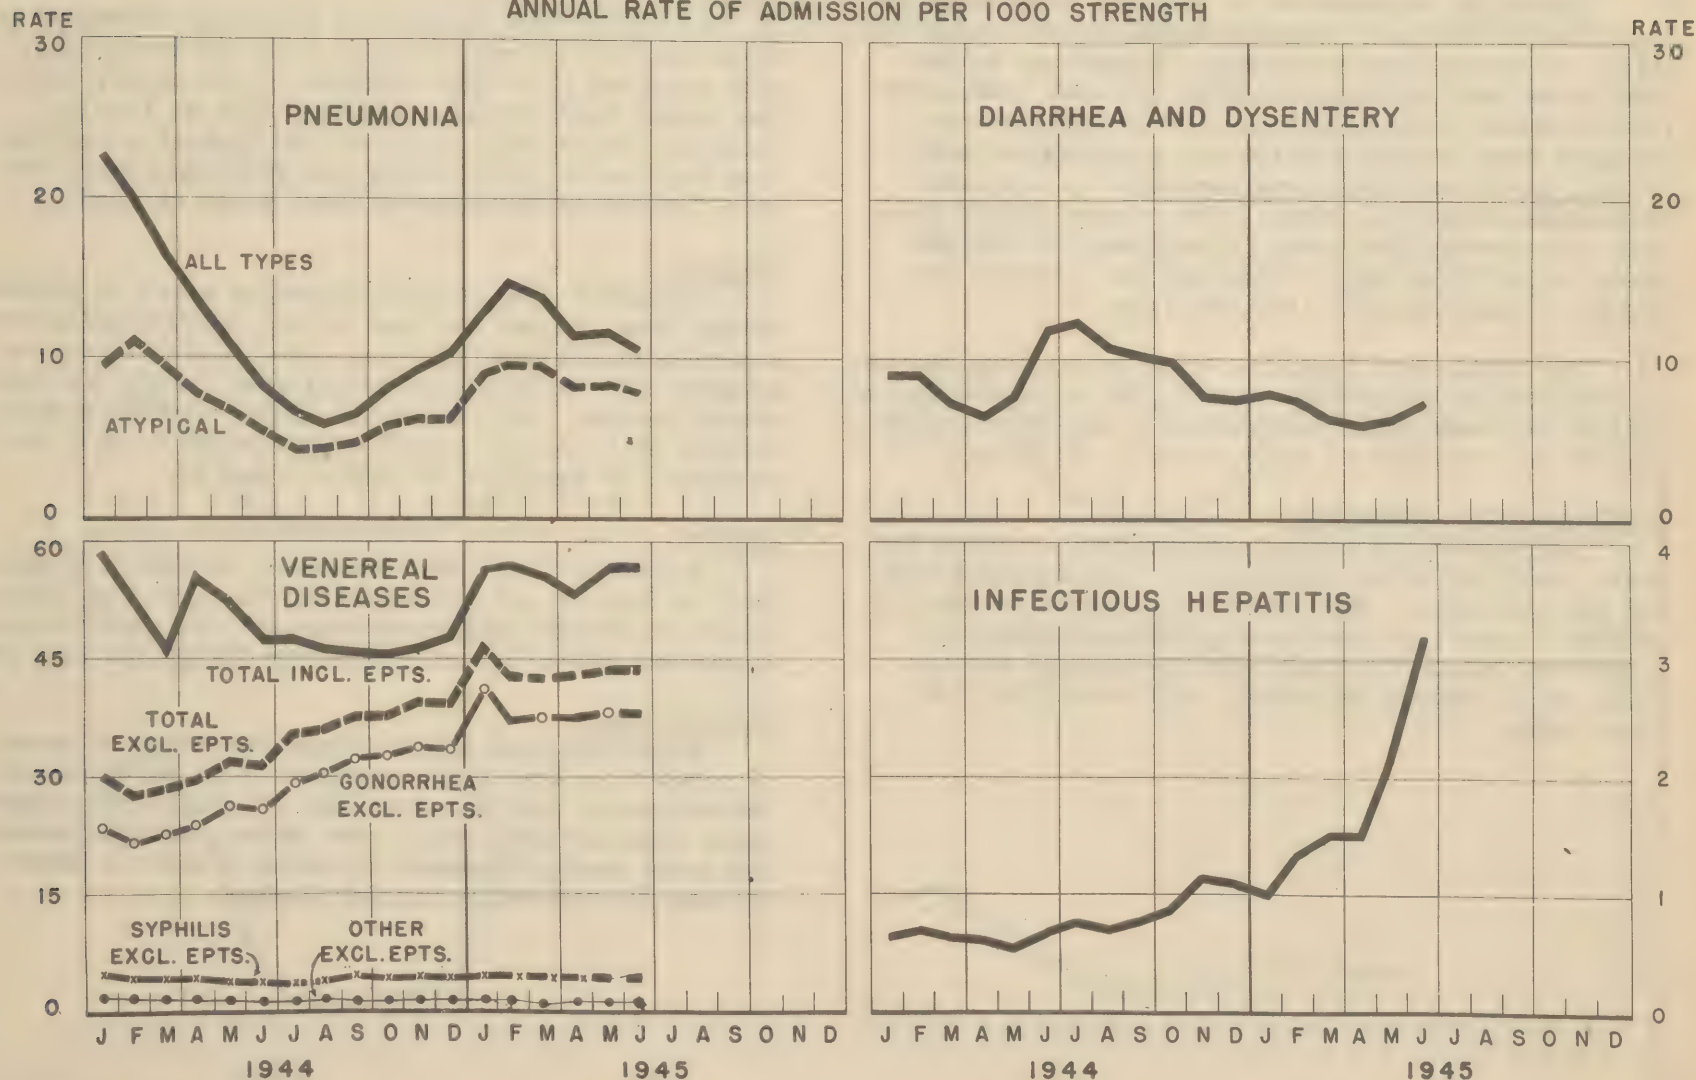

The venereal disease cases remaining under treatment on 29 June are shown below:

Service Command	Number Remaining Under Treatment		Venereal Disease Cases as Percent of All Cases	
	Syphilis	Other	Syphilis	Other
TOTAL U.S.	1352	806	.45	.27
I	78	8	.5	.1
II	42	45	.2	.2
III	166	89	.6	.3
MDW	8	26	.2	.6
IV	351	205	.6	.3
V	51	69	.2	.2
VI	11	27	.1	.1
VII	109	91	.4	.3
VIII	326	113	.7	.2
IX	210	133	.5	.3

The great bulk of the cases remaining were contracted after entry on active service. The number of syphilis cases remaining at the end of June was 4 percent higher than for May, while the number of cases of venereal diseases other than syphilis increased 1 percent. Total venereal cases represented .72 percent of the total number of patients remaining under treatment in hospital. The very much longer duration of hospitalization for syphilis is indicated by the fact that only 9 percent of the total venereal admissions (excluding EPTS cases) were for this cause, even though 62 percent of the cases remaining under treatment were syphilis cases.

MORBIDITY FROM—PNEUMONIA—DIARRHEA AND DYSENTERY VENEREAL DISEASES—INFECTIOUS HEPATITIS

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

Morbidity represented by venereal EPTS cases was reported at 12.7 per thousand during June as compared with 13.0 per thousand for May. Variations in the admission rate for venereal EPTS cases as between Service Commands have relatively little significance, because they reflect a different geographical and racial distribution of Army personnel as compared with that of new inductees. The average weekly number of venereal EPTS cases in June was 722 as compared with 713 in May, reflecting the trend of the number of men inducted into the Army.

The total days lost from duty during June because of venereal disease were about 70,000 or an average of 14,000 per week; this represented a non-effective rate of .68 per thousand as compared with .70 in May.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis remained at about the same level as during the previous five months (about .6 per thousand). The current experience is about 20 percent lower than that during the corresponding period of 1944. The Third Service Command was the only one to report relatively high morbidity from this cause.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis increased by 50 percent to 3.2 per thousand which is the highest rate reported since the epidemic in the summer of 1942. The Second Service Command with a rate of 10.8 per thousand continued to register the highest morbidity from this cause, followed by the First and Third Service Commands with rates of about 8 per thousand.

MEASLES:

Morbidity from measles decreased about 30 percent during June and was the same as the corresponding rate experienced for June 1944 and also about 5 times the minimum rate which may be anticipated during the late summer months. The Fourth and Eighth Service Commands were the only ones to report an admission rate in May in excess of that for the entire country.

MUMPS:

Morbidity from mumps decreased by almost 30 percent in June to 5.2 per thousand, which is the lowest figure registered this year although this rate is about 15 percent above the corresponding figure for June 1944.

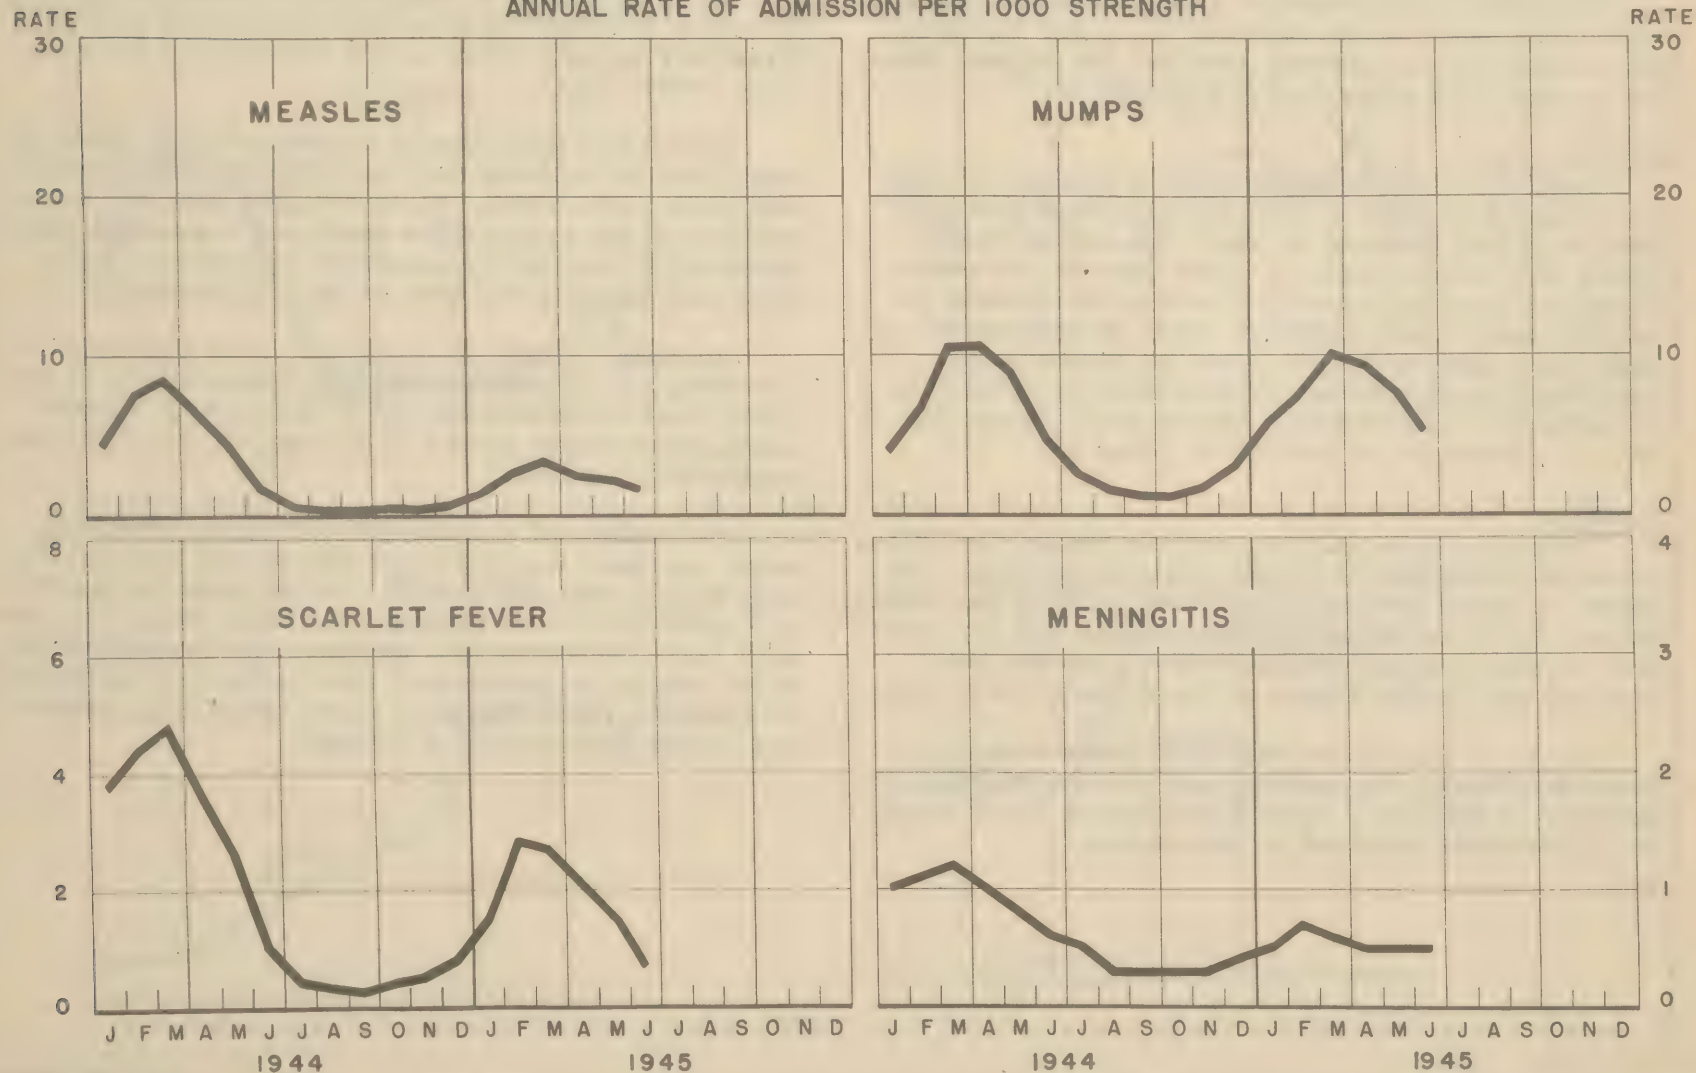

SCARLET FEVER:

Morbidity from scarlet fever decreased by about 55 percent in June to be reported at .7 per thousand. The admission rate for June 1945 was about 30 percent lower than for June 1944. The Second, Sixth, Seventh and Ninth Service Commands reported a rate in excess of that for the entire United States.

MORBIDITY FROM — MEASLES — MUMPS

SCARLET FEVER — MENINGITIS

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

RHEUMATIC FEVER:

Morbidity from rheumatic fever decreased 30 percent during June, being reported at .9 per thousand. The Seventh Service Command reported the highest morbidity from this cause (1.4 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 1.2 per thousand in June or a notable increase from the rate of .9 per thousand in May. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. As of 29 June there were 1986 cases of tuberculosis remaining under treatment representing .7 percent of all patients in hospitals. Of the total cases, 992 were at Fitzsimons GH and 623 at Bruns GH.

MALARIA:

Morbidity from malaria acquired inside the United States was reported at .1 per thousand in June. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 1165 per week, which is the lowest figure so far recorded this year.

As of 29 June there were 2956 cases of malaria under treatment, representing 1.0 percent of all patients in hospital. Only 9 cases were those where the disease was acquired in this country.

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders decreased by almost 10 percent in June to 43.4 per thousand, which is the lowest rate reported since August 1944.

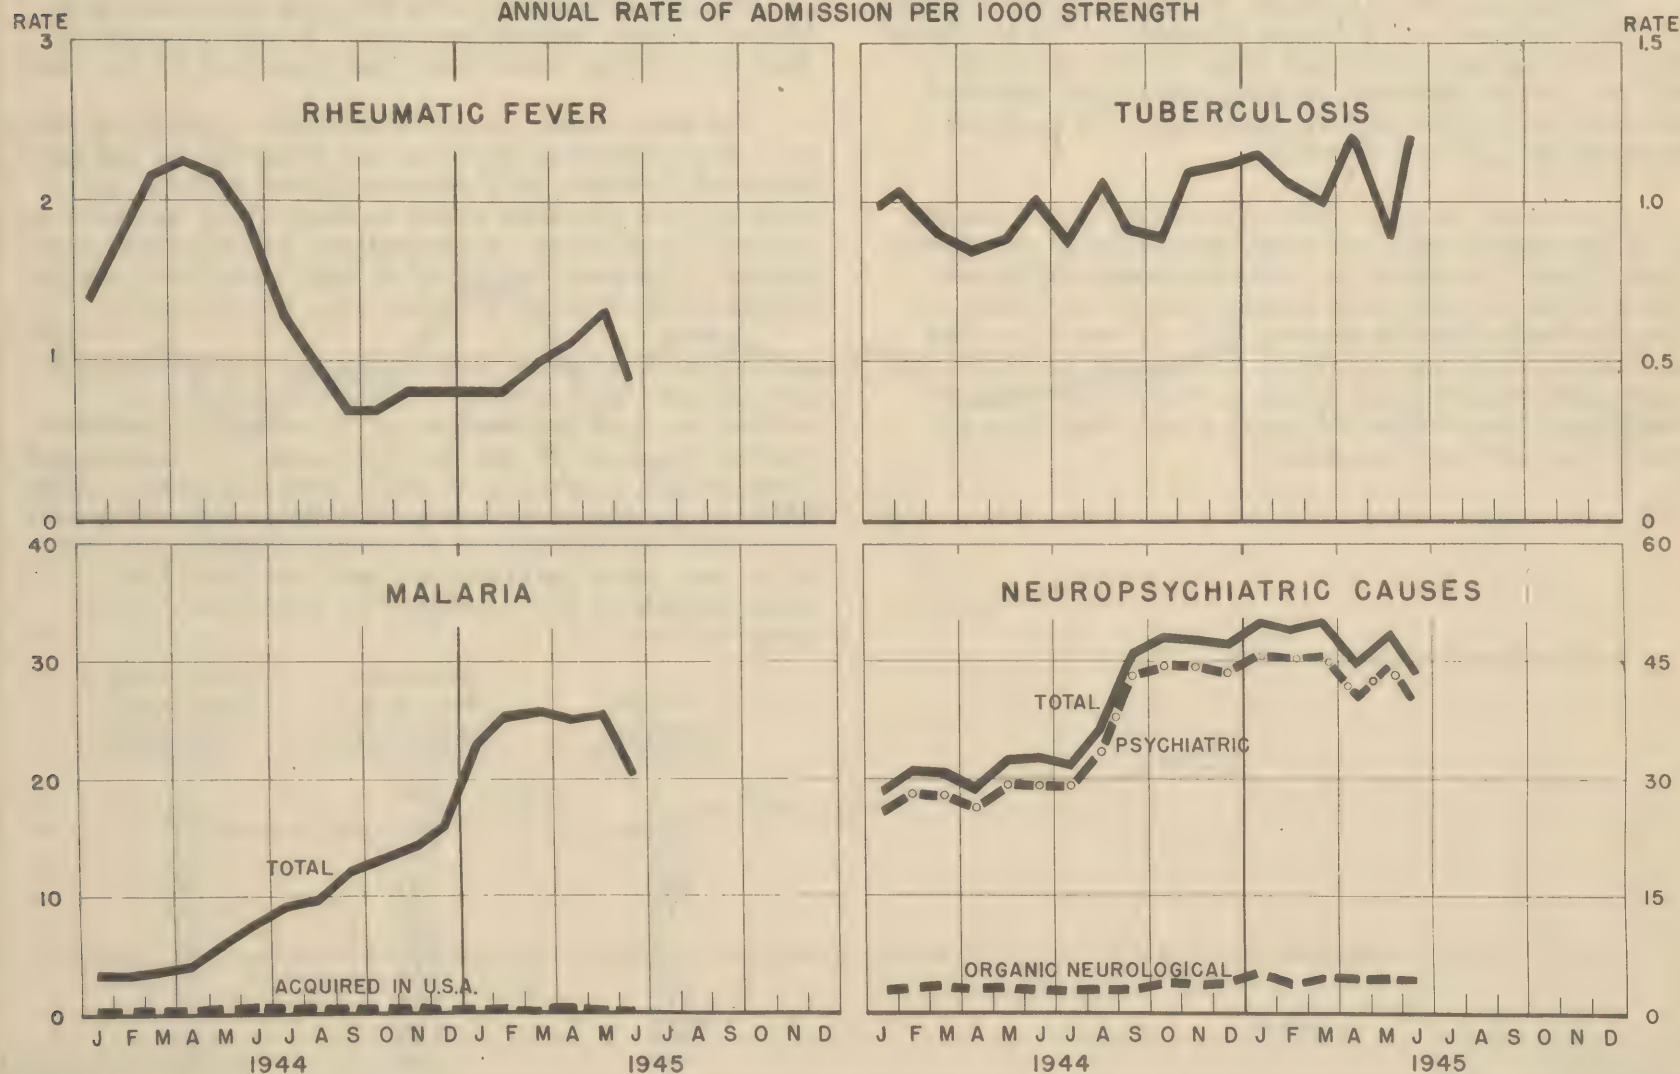

During June there was an average of 2590 CDD's per week given to enlisted men classified as neuropsychiatric cases, or about 20 percent higher than the weekly average for May. The CDD's in June for men with neuropsychiatric disorders represented 37 percent of all CDD's or slightly lower than in May (39 percent).

In June, organic neurological cases accounted for 9 percent of all neuropsychiatric cases. Only in the Fifth Service Command did the proportion of organic neurological cases exceed 15 percent of the total neuropsychiatric cases.

The number of neuropsychiatric cases remaining under treatment as of 29 June was 37,541 or about 100 less than at the end of May. During June the number of locked ward cases remained the same, while the open ward cases decreased by 1 percent. Neuropsychiatric cases remaining represented 12.4 percent of all patients in hospital, with open ward cases being 10.6 percent and locked ward cases 1.8 percent.

MORBIDITY FROM — RHEUMATIC FEVER—TUBERCULOSIS MALARIA — NEUROPSYCHIATRIC CAUSES

CONTINENTAL UNITED STATES
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

MORTALITY:

Mortality from all causes during June was reported at 2.53 per year per thousand strength. The mortality rate from disease decreased from .83 per thousand in May to .79 per thousand in June, while the reported mortality rate from injury increased from 1.46 per thousand to 1.60 per thousand.

It should be noted that the reporting of deaths on Forms 86ab is not complete, particularly for deaths from injury for which the understatement may be as great as 10 percent (see Special Report on Deaths in 1944 in Weekly Health Report, Vol. V, No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 1.76 per thousand, resulting in an estimated total death rate from all causes of 2.69 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for Army personnel stationed in this country was about 30 per thousand in June or slightly lower than the figure of 33 for May.

The mean number of non-effectives (including evacuees from overseas) for June was reported at 101 per thousand strength or 4 percent higher than in May; most of this increase arose because of an increase in hospital population at General and Convalescent Hospitals. The mean number of injury non-effectives per thousand strength in June was 18.4 per thousand.

Variations in the mean number of non-effectives per thousand strength by Service Command do not reflect so much the variations in morbidity between Service Commands as the varying number of General and Convalescent Hospitals in each Service Command. When comparisons are made between the rates excluding such hospitals the variations by Service Command are seen to be very much smaller than when the days lost in these hospitals are included, as evidenced in the table below:

<u>Service Command</u>	<u>Including Gen. and Conv. Hosp.</u>	<u>Excluding Gen. and Conv. Hosp.</u>
